Organizational Information

Please read the following directions carefully and acknowledge them with your signature.

1. Please place your student ID card and a photo ID on the table for checking
2. The grading information on the cover sheet holds with the proviso of further checking.
3. no resources or tools are allowed except for a pen.
4. You have 90 min(sharp) for the test
5. You can reach 69 points if you fully solve all problems. You will only need 55 points for a perfect score, i.e. 14 points are bonus points.
6. Write the solutions directly on the sheets.
7. If you have to abort the exam for health reasons, your inability to sit the exam must be certified by an examination at the University Hospital. Please notify the exam proctors and have them give you the respective form.
8. Please make sure that your copy of the exam is complete (13 pages including cover sheet and organizational information pages) and has a clear print. **Do not forget to add your personal information on the cover sheet and to sign this declaration (next page).**

Declaration: With my signature I certify having received the full exam document and having read the organizational information above.

Organisatorisches

Bitte lesen die folgenden Anweisungen genau und bestätigen Sie diese mit Ihrer Unterschrift.

1. Bitte legen Sie Ihren Studentenausweis und einen Lichtbildausweis zur Personenkontrolle bereit!
2. Die angegebene Punkteverteilung gilt unter Vorbehalt.
3. Es sind keine Hilfsmittel erlaubt außer eines Stifts.
4. Die Lösung einer Aufgabe muss auf den vorgesehenen freien Raum auf dem Aufgabenblatt geschrieben werden; die Rückseite des Blatts kann mitverwendet werden. Wenn der Platz nicht ausreicht, können bei der Aufsicht zusätzliche Blätter angefordert werden.
5. Wenn Sie die Prüfung aus gesundheitlichen Gründen abbrechen müssen, so muss Ihre Prüfungsunfähigkeit durch eine Untersuchung in der Universitätsklinik nachgewiesen werden. Melden Sie sich in jedem Fall bei der Aufsicht und lassen Sie sich das entsprechende Formular aushändigen.
6. Die Bearbeitungszeit beträgt 90 min.
7. Sie können 69 Punkte erreichen, wenn Sie alle Aufgaben vollständig lösen. Allerdings zählen 55 Punkte bereits als volle Punktzahl, d.h. 14 Punkte sind Bonuspunkte.
8. Überprüfen Sie Ihr Exemplar der Klausur auf Vollständigkeit (13 Seiten inklusive Deckblatt und Hinweise) und einwandfreies Druckbild! **Vergessen Sie nicht, auf dem Deckblatt die Angaben zur Person einzutragen und diese Erklärung zu unterschreiben!**

Erklärung: Durch meine Unterschrift bestätige ich den Empfang der vollständigen Klausurunterlagen und die Kenntnisnahme der obigen Informationen.

(Unterschrift)

Please consider the following rules; otherwise you may lose points:

- If you continue an answer on another page, please indicate the problem number on the new page and give a page reference on the old page.
- Always justify your statements (we would like to give points for incorrect answers). Unless you are explicitly allowed to, do not just answer “yes”, “no”, or “42”.
- If you write program code, give comments!

1 Search

Problem 1.1 Does a finite state space always lead to a finite search tree? How about a 3 pt finite space state that is a tree? Justify your answers.

Problem 1.2 (Search Strings)

You are given a tree of the following form:

8 pt

None of the nodes in this tree are goal nodes. In what order would the nodes be traversed for the following search types:

1. breadth-first search
2. depth-first search
3. uniform-cost search
4. greedy search, where you take the “alphabetic distance” (the number of letters) between the node label and the letter S as the heuristic.

Give the solution as a simple string i.e. ABCDE

2 Adversarial Search

Problem 2.1 (Game Tree)

Consider the following game tree. Assume it is the maximizing player's turn to move. The values at the leaves are the static evaluation function values of the states at each of those nodes.

1. Label each non-leaf node with its minimax value. See above 20 pt
2. Which move would be selected by Max? 5 pt
3. List the nodes that the alpha-beta algorithm would prune (i.e., not visit). Assume children of a node are visited left-to-right. 15 pt
4. In general (i.e., not just for the tree shown above), if we traverse a game tree by visiting children in right-to-left order instead of left-to-right, can this result in a change to 10 pt
 - (a) the minimax value computed at the root?
 - (b) The number of nodes pruned by the alpha-beta algorithm?

Problem 2.2 (Minimax Restrictions)

Name at least five criteria that a game has to satisfy in order for the [minimax algorithm](#) 5 pt to be applicable.

3 Constraint Satisfaction Problems & Inference

Problem 3.1 (Scheduling CS Classes)

You are in charge of scheduling for computer science classes that meet Mondays, Wednesdays and Fridays. There are 5 classes that meet on these days and 3 professors who will be teaching these classes. You are constrained by the fact that each professor can only teach one class at a time. The classes are:

- Class 1 - Intro to Programming: meets from 8:00-9:00am
- Class 2 - Intro to Artificial Intelligence: meets from 8:30-9:30am
- Class 3 - Natural Language Processing: meets from 9:00-10:00am
- Class 4 - Computer Vision: meets from 9:00-10:00am
- Class 5 - Machine Learning: meets from 9:30-10:30am

The professors are:

- Professor A, who is available to teach Classes 3 and 4.
- Professor B, who is available to teach Classes 2, 3, 4, and 5.
- Professor C, who is available to teach Classes 1, 2, 3, 4, 5.

1. Formulate this problem as a CSP problem in which there is one variable per class, stating the domains, and constraints. Constraints should be specified formally and precisely, but may be implicit rather than explicit. 4 pt
2. Give the constraint graph associated with your CSP (e.g. by giving the edges). 2 pt
3. Show the domains of the variables after running arc-consistency on this initial graph (after having already enforced any unary constraints). 4 pt
4. Give one solution to this CSP. 1 pt
5. Your CSP should look nearly tree-structured. Briefly explain (one sentence or less) why we might prefer to solve tree-structures CSPs. 2 pt
6. Name (or briefly describe) a standard technique for turning these kinds of nearly tree-structured problems into tree-structured ones. 2 pt

4 Logic

Problem 4.1 (Propositional Tableaux)

Prove the following formula by exhibiting a closed \mathcal{T}_0 tableau.

5 pt

$$(\mathbf{A} \wedge \mathbf{B} \wedge \mathbf{C}) \Rightarrow (\mathbf{A} \Rightarrow \mathbf{B} \wedge \mathbf{C})$$

Problem 4.2 (Inference and Entailment)

4 pt

1. Define and briefly explain the entailment and inference relations.
2. How do we write “**A** entails **B**” and “from **A** we can infer/deduce **B**” in symbolism?
3. What is the difference between the two relations.

Problem 4.3 (Resolution Calculus)

Use the resolution calculus to prove the validity of the expression:

6 pt

$$(X \wedge Y) \vee (X \wedge \neg Y) \Rightarrow X$$

5 Planning

Problem 5.1 (Planning Bike Repair)

Consider the following problem. A bicycle has a front wheel and a back wheel installed and both wheels have a flat tire. A robot needs to repair the bicycle. The room also contains a tire pump and a box with all the other equipment needed by the robot to repair a bicycle. The robot can repair a wheel with the help of the box and the tire pump when the robot and the three objects are at the same position. The bicycle is repaired when the robot has done a final overall check which requires both tires to be repaired and to be installed on the bicycle again. For this check, the box is also needed at the same position as the bicycle and the robot. 18 pt

The exercise is to model this problem as a STRIPS planning task. In doing so, assume the following framework. The robot is currently at position “A”, the bicycle is at position “B”, and the “Frontwheel” and the “Backwheel” are installed on the “Bicycle”. The “Box” is at position “C” and the “Pump” at position “D”. The actions available for the robot are:

- “Go” from one position to another. The four possible positions A, B, C, and D are connected in such a way that the robot can reach every other place in one “Go”.
- “Push” an object from one place to another. The bicycle is not pushable and the wheels are only pushable if not installed on the bicycle; obviously the robot cannot push itself; every other object is always pushable. “Push” moves both the object and the robot.
- “Remove” a wheel from the bike.
- “RepairWheel” to fix a wheel with a flat tire.
- “InstallWheel” to put a wheel back on the bike.
- “FinalCheck” to make sure that not only the two wheels are repaired and installed but also the rest of the bike is in good condition. The box is needed at the same position for this.

- Write a STRIPS formalization of the initial state and goal descriptions.
- Write a STRIPS formalization **of the actions *Remove* and *FinalCheck*, and only these two actions**. In doing so, please make use of “object variables”, i.e., write the actions up in a parametrized way. State, for each parameter, by which objects it can be instantiated.

In both (a) and (b), make use of only the following predicates:

- $At(x, y)$: To indicate that object $x \in \{Robot, Bicycle, Frontwheel, Backwheel, Box, Pump\}$ is at position $y \in \{Bicycle, A, B, C, D\}$.

- *Pushable(x)*: To indicate that object $x \in \{Robot, Bicycle, Frontwheel, Backwheel, Box, Pump\}$ can be pushed.
- *Repaired(x)*: To indicate that object $x \in \{Robot, Bicycle, Frontwheel, Backwheel, Box, Pump\}$ is repaired.
- *FlatTire(x)*: To indicate that object $x \in \{Robot, Bicycle, Frontwheel, Backwheel, Box, Pump\}$ has a flat tire.
