

MathUI 2021: Mathematical User Interaction

MathUI is an international workshop to discuss how users can be best supported when doing, learning communicating with, and searching for mathematics digitally, in short, interacting with mathematical content using digital means. Our leading questions are the following:

- What do we know about interactions between users and math?
- Which mathematical services can be offered, and can they be meaningfully combined?
- How is mathematics for which purpose best represented?
- What specifically math-oriented support or platforms are needed?
- How can we exploit best practices concerning mathematics for better math-user interactions?

On the 31st July, 2021, the 13th instance of MathUI was gracefully hosted online by the West University of Timisoara, Romania. A warm thank you to our organizers, chairs, reviewers, and last but not least authors!
